

Bachelor of Music (Honours) Projects for 2019

Exploring the efficacy of a single Active Music Therapy session to reduce clinic-related anxiety in school-aged children with 22q11.2 Deletion Syndrome

Course: MUSC4500 (Thesis)

Description: This project investigates the impact of a single session music therapy intervention on school-aged children and adolescents with 22q11.2 Deletion Syndrome clinic-related situational anxiety. The research is being conducted in collaboration with a research group at the Child Health Research Centre – Centre for Clinical Trials in Rare Neurodevelopmental Disorders and Lady Cilento Children’s Hospital. The successful applicant will work with Dr Broughton on the aspect of the project focusing on observational analysis of children’s behaviours in relation to the music therapy session.

Primary Supervisor: Dr Mary Broughton
